### WEIGH-A-DAY-A-MONTH RECORDKEEPING PLAN MAKING PROGRESS

A recent report from the States on the status of the Weigh-A-Day-A-Month Recordkeeping Plan shows this plan is now operating in 41 States and 1 Territory and includes 3,008 herds with 60,508 cows in 605 counties. This is very good progress, considering that many States did not have an opportunity to announce the plan to their county agents and farmers until after the first of the year.

Various States report that through the promotion of the Weigh-A-Day-A-Month Recordkeeping Plan more and more dairy-men are becoming familiar with the value of keeping records. A substantial proportion of those who become interested in keeping records on their dairy herds desire additional information than is obtained in the WADAM plan and are, therefore, joining the Owner-Sampler or the Standard Dairy Herd Improvement Record-keeping Plans.

Judging from the enthusiastic reports from the States, continual and steady growth is expected in the Weigh-A-Day-A-Month Recordkeeping Plan, as well as in the Owner-Sampler, and Standard plans of recordkeeping. These three plans make up the National Cooperative Dairy Herd Improvement Program.

# DHIA PROVED-SIRE RECORDS TABULATED IN MAY 1957

Following is a list of 518 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in May 1957. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., \*12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., \*May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
